

MINOR IN MATHEMATICAL FINANCE

Marc Angelo U. Pollentes

I started up with a such a passion with mathematics. I always thought that college will be easy and will be the same as high school. I could go through the semesters without giving that much effort. But, I was so wrong. Everything should be done with the outmost effort just to pass. My love with mathematics was mixed with hate and suffering. I was sleepless and tired almost everyday. Needless to say, it was all worth it. It was a journey that changed me drastically, preparing me for the world.

Angelou C. Prado

I found harbor four years ago at the Ateneo, from a map I'd charted with numbers and differential equations and theorems. But it has been a hard voyage since. I've been frustrated by the same numbers that have brought me here. I have questioned my docking at this port. But I've persevered, with the help of Koreanovelas to ease the stress. Here I am, at the end of four years, about to set sail again. Then, now, and always, this voyage is for my family and for God. (V. Villanueva)
