My professor once said, “the integral is not complete without the  $dx$  at the end.” College life can be likened to that integral. It may end here but everything that happened in between those two symbols will always be memorable. There are times when  $f(x)$  is as easy as  $x-1$ , while sometimes it needs more time to think about. No matter how difficult it is to find the antiderivative, there’s always someone there willing to help me. I’m grateful to all of you. Now, it’s another integral awaiting a  $dx$ .

DOUBLE MAJOR IN BS COMPUTER SCIENCE
