

SPECIALIZATION IN BIOMEDICAL SCIENCE

Floriann Mari M. Mabagos

From the 7:30 AM lab classes to the midnight Microbio thesis work. From the frog and cat dissections in the lab to field works in Bataan for Ecology, and Makiling for Systematics. From studying and taking naps in the Sec B labs to being desensitized by the smell in Sec B 210. From scrambling for microscope 11 to take good photos of tissues and bacteria to breaking slides and test tubes. When Life Sci shows you life's high, it's hard to say goodbye.

MINOR IN BIOMEDICAL SCIENCES

Emmanuel Joseph M. Mamaril

I remember thinking what it was going to be like, how exciting college was going to be. Well, it soon came to be a huge understatement—I had fun, I crammed, I cried, I met people and friends who became family, I lived. College was a springboard to life, or yet, an awakening to it. It taught me to let go of apprehensions, of too much control. It taught me to stay open to possibilities—that not all will make sense now, but in the acceptance of the uncertain is where I will find my growth.
