

MINOR IN JAPANESE STUDIES

Julienne Kirsten O. Khoo

Life will neither be about grades nor failures. Messed up? Stand up. Failed Math? Try again. Got hurt? Love again. To the countless papers, all-nighters and math problems, I made it. The past four years taught me a life lesson that I will never forget: magtaya at magnahal. Because life is all about creating mistakes and learning from them. Thank you for turning me into a person of life, hope and love.

MINOR IN ECONOMICS

Oliver Lance C. Ku

The concept of the measure generalizes that of length, area, and volume. The distance between zero and one, intuitively, has a measure of one. But, interestingly, it can be subdivided into sets of infinitely many single points, amounting to a measure of zero. I carry with me what feels like an infinite collection of individual moments, spanning this specific length of four, for which I will forever be grateful.
